

Agaleaf

POURQUOI LE CHOISIR

- AGENTS MOUILLANTS
- ACTION RAPIDE
- RÉPONSE IMMÉDIATE

EMBALLAGE:

1 Kg

Application of AGALEAF helps accelerate the quick reaction needed by foliar application. There is no chloride, carbonates or contaminants to preserve the leaf surface and obtain immediate nutritional action. The wetting agent allows this product to be rapidly effective in the metabolism of the plant. The right ratio between the macro, meso and microelements permits to AGALEAF to be the right solution across different phenological phases of the crop. The pureness of its components allows the product to be one of the most important and flexible instruments for each foliar application. It is always better to apply between 1 and 3 kilograms per hectare of AGALEAF in minimum 300 liters of water. Agafert technical staff always suggest to adjust the quantity of fertilizer applied according to the real needs of the crop, to the water applied.
